User Stories: Interviews

User Stories

1. Tourist using the app for a once-off - Xinyi Zhou, 26, visiting from China

2. Regular user of the app - Alex Gavin, 18, grew up in Dublin

3. Motorist needing the app for a once-off - Michael O'Brien, 33, grew up in Ireland but outside of Dublin (less familiar with bike routes)

Interview Questions

1. Have you used Dublin bikes before?
2. What is the step-by-step process of hiring a bike once you download the app? / What would you expect this to be?
3. What sort of visuals would you expect in the app?
4. (Tourist) Do you use a similar app at home, and if so what would you improve from it for our app?
5. Would you be willing to pay for a subscription, or should this app be free?
6. Would you use a journey planning section in the app if one were implemented? Would you expect this to automatically split across different modes of transport?
7. Do you think this app would benefit from two-factor authentication?
8. Do you think this app would benefit from a chatbot feature?

Interview Questions - Tourist

1. Have you used Dublin bikes before?

    a. No

2. What is the step-by-step process of hiring a bike once you download the app? / What would you expect this to be?
    a. Connection with my phone number for verification of a human
    b. Trying to locate me geographically
    c. Trying to locate the nearest bikes
    d. Visualisation of where the bikes are to compare which is the best option (and which bikes are newer/older)
    e. Select favourite - add the number of the bike (identification) into the app to request the bike to be unlocked for me - potential bluetooth verification
    f. The app will unlock for me, I can now use the bike from the location
    g. May need the app to plan a route for me if it has that feature
    h. When I reach my destination, I'll check if there's an available spot for me to lock the bike nearby using the app and once complete, pay for the bill via the app - potential risk here of not being able to find a space to lock the bike
3. What sort of visuals would you expect in the app?
    a. Smooth GUI and use of bluetooth, would be put off as a tourist if there are issues or if there are not enough locations for bikes or supply of bikes
    b. Some sort of guidance for first-time users to help navigate the platform the first time you open each part of the app and each part of the GUI for example - how to find the bike, how to unlock it, how to use any route planning, how to return the bike, and how to pay
    c. Home page: a map of Dublin city to locate me and then nearby bikes - can easily see where they all are and I can make a quick decision about where to go to get a bike (or lock mine)
        i. Have this before a login page so I can avoid setup if there are no bikes available
    d. Ideally the same page for booking/verification - minimal, small pop-up window for the steps
4. (Tourist) Do you use a similar app at home, and if so what would you improve from it for our app?
    a. In China there is a similar bike app (phone, not web page). Sometimes I would get stuck at the bluetooth verification due to the network and bluetooth on my phone, and I'd have to restart the whole app and start from scratch which is very time-consuming. I need a bike every morning so this is very frustrating for getting to work on time. I would want a smooth experience with consistently reliable network & bluetooth on the app here as I am a tourist here and less familiar with the location than at home. If I got stuck somewhere and it would be possible to refresh/retry rather than going back to the beginning, it would be a much more efficient experience.
5. Would you be willing to pay for a subscription, or should this app be free?
    a. No, not really 😟
6. Would you use a journey planning section in the app if one were implemented? Would you expect this to automatically split across different modes of transport?
    a. Yes definitely, I am new here and I have no idea where I can ride or how to get to my destination, so if the app can suggest a route for me that would be perfect!
7. Do you think this app would benefit from two-factor authentication?
    a. As I'm a tourist I don't think it's a good idea, as the 2FA will be too time-consuming and complicated for a tourist to implement, especially with potentially having to download further apps

etc, just to use the app maybe once or twice. It seems unnecessary from my perspective.

8. Do you think this app would benefit from a chatbot feature?
    a. As a tourist I don't think it's necessary as I don't think I have too many things to talk/ask about with the chatbot during my use of the app. My top priority is to know the route and ride from Place A to Place B and I don't need somebody to support me along the journey.

Interview Questions - Regular User

1. Have you used Dublin bikes before?
    a. Yes, 5 times a week on average
2. What is the step-by-step process of hiring a bike once you download the app?
    a. First open the app and log in (should be default by now)
    b. Open my GPS and and find the nearest bike station to check if there's *any available* and book one to take in the next 15 minutes
    c. I go to the location and with my app open on the phone I can use the bluetooth connection to make the bike I've booked make a noise for me to unlock it
    d. I use Google Maps if I need to plan my journey to my destination - I am familiar with where the most common bike locations are and can generally plan ahead to lock up my bike at the closest one to my destination
    e. I check the app to make sure there is space to lock the bike at the location I have chosen - the app can tell me if there is expected availability around my time of arrival (estimated by my Google Maps)
    f. Once I have locked up the bike, the money is deducted from my account, I hold a monthly card so it is deducted from my allowance
3. What sort of visuals would you expect in the app?
    a. Map takes up the majority of the screen, there is a bar with buttons at the bottom
    b. I can select the bike location on the map and there will be a pop-up with a button to organise a booking
    c. The buttons on the bottom bar include a tab for my account (email, financials, phone number, address, etc.), one for viewing previous locations of bookings, one to return to the home page (map)
4. Would you be willing to pay for a subscription, or should this app be free?
    a. I am paying a monthly subscription which includes paying for each of my bookings up to a monthly limit of 40 rides per month
5. Would you use a journey planning section in the app if one were implemented? Would you expect this to automatically split across different modes of transport?
    a. Yes absolutely, that would be more helpful than jumping between the bike app and the Google Maps app
6. Do you think this app would benefit from two-factor authentication?
    a. I think it's too complicated for an app like this (maybe when the subscription renews?)
7. Do you think this app would benefit from a chatbot feature?

    a. That could be useful for asking about weather predictions or traffic interruptions due to events like marathons etc. Ideally the latter would be included in the journey planning implementation, but the chat bot could tell me when it will all end

Interview Questions - Motorist

1. Have you used Dublin bikes before?
    a. No
2. What is the step-by-step process of hiring a bike once you download the app? / What would you expect this to be?
    a. I would expect a simple enough log-in setup that would be appealing to new users, rather than a huge amount of details
    b. Log in using email or phone and track my location
    c. Let me see the bike stations nearby and their availability
    d. Allow me to book a bike (if available)
    e. Include some indication of journey planning so I don't get lost, or clear matchup with Google Maps for finding the stations
    f. Allow me to see the bike stations with spaces at my destination
    g. Allow me to lock the bike up and pay with my Apple Pay so I don't have to input too many financial details
3. What sort of visuals would you expect in the app?
    a. I would expect very clear mapping of the bike routes so I don't end up on a street where bikes aren't allowed, or a one-way system
    b. A map of Dublin to locate me and the bike stations would be the primary visual that takes up most of the page
    c. Some sort of guidance for first-time users (optional) to help navigate the platform and each part of the GUI e.g.: how to find the bike, how to unlock it, how to use any route planning, how to return the bike, and how to pay
    d. Simple pop-ups for booking and payment, nothing overly complex
4. Would you be willing to pay for a subscription, or should this app be free?
    a. No
5. Would you use a journey planning section in the app if one were implemented? Would you expect this to automatically split across different modes of transport?
    a. Yes, especially if I am reliant one one whilst driving and will be unfamiliar with the bike routes around the city
6. Do you think this app would benefit from two-factor authentication?
    a. Not for a once-off
7. Do you think this app would benefit from a chatbot feature?
    a. Not for a once-off
