

how to pull latest version from main branch

Since you're working with Git a lot recently (Data-Analytics, COMP30830 project, different branches like Yian), I'll give you the **clean, safe workflow** depending on your situation.

✅ Scenario 1: You are already on `main` and just want the latest version

```

</> Bash
git checkout main
git pull origin main
  
```

That's it.

✅ Scenario 2: You are on another branch (e.g. `Yian`) and want the latest `main`

First update your local `main` :

```

</> Bash
git checkout main
git pull origin main
  
```

Then go back to your branch and merge:

```

</> Bash
git checkout Yian
git merge main
  
```

✅ Scenario 3 (Better practice): **Rebase your branch on latest main**

This keeps history cleaner (recommended for coursework projects):

```

</> Bash
git checkout main
git pull origin main

git checkout Yian
git rebase main
  
```

If conflicts happen:

```

</> Bash
# fix files
git add .
git rebase --continue
  
```

✅ If you only want to update your local `main` without switching branches

```

</> Bash
  
```

```
git fetch origin
git merge origin/main
```

(or)

```
</> Bash
git pull origin main
```

Quick Mental Model (Important for you)

- fetch → download changes
- pull → fetch + merge
- merge → combine histories
- rebase → replay your commits on top of main (cleaner)

Very Important (Since You Sometimes Reset)

Before pulling, check:

```
</> Bash
git status
```

If you see:

```
Changes not staged for commit
```

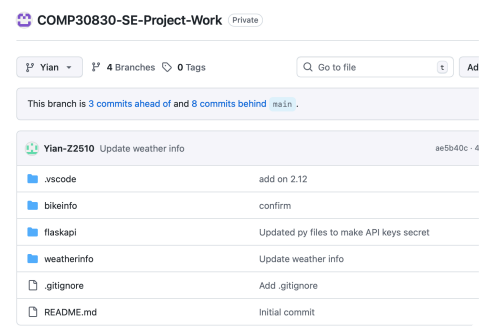

Either:

- `git add . && git commit -m "save work"`
or
- `git stash`

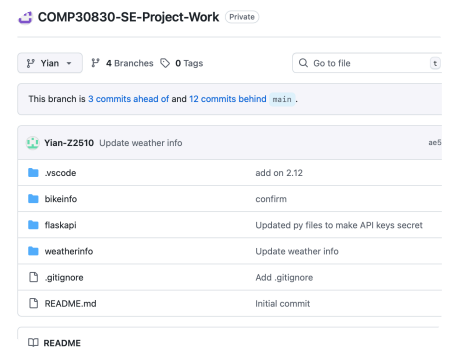

Otherwise pull may fail.

If you tell me:

- Which branch you're on
- Whether this is COMP30830 or Data-Analytics repo
- Whether you want merge or rebase

why I'm 8 commits behind main

(base) ➔ COMP30830-SE-Project-Work git:(main) × git status
On branch main
Your branch is up to date with 'origin/main'.

Untracked files:
(use "git add <file>..." to include in what will be committed)
db_to_JSON/
weatherinfo/.DS_Store
weatherinfo.idea/

nothing added to commit but untracked files present (use "git add" to track)

(base) ➔ COMP30830-SE-Project-Work git:(main) ×

but on GitHub, I'm still 12 commits behind

```
(base) ➔ COMP30830-SE-Project-Work git:(main) × git checkout
Yian
Switched to branch 'Yian'
Your branch is up to date with 'origin/Yian'.
(base) ➔ COMP30830-SE-Project-Work git:(Yian) × git merge
origin/main
CONFLICT (modify/delete): .DS_Store deleted in HEAD and modified
in origin/main. Version origin/main of .DS_Store left in tree.
Automatic merge failed; fix conflicts and then commit the result.
(base) ➔ COMP30830-SE-Project-Work git:(Yian) ×
```
